Structures has to do with designing the body of the vehicle and other 'structures' so that they might be able to withstand the various stresses the vehicle may be subjected to in flight. Aerodynamics involves studying the way the vehicle affects the flow field around it, causing lift, drag and pitching moments on the body of the vehicle.

A stall is a condition in aerodynamics and aviation such that if the angle of attack increases beyond a certain point, then lift begins to decrease. The angle at which this occurs is called the critical angle of attack.This angle is dependent upon the airfoil section or profile of the wing, its planform, its aspect ratio, and other factors, but is typically in the range of 8 to 20 degrees ...

Stall (fluid dynamics) - Wikipedia

Future progress in aeronautics will be based on the coupling of advanced tools with new understandings of fluid mechanics and interactions between the various aeronautical disciplines. New interdisciplinary computational tools and new experimental capabilities will play increasingly important roles in aeronautical technology progress.
