Alfa Laval Viscochief VCU 160 (Viscosity Control Unit) is the main component controlling the viscosity of the fuel supply to the main engine of the ship. Supplied within the unit, information from the sensor measuring current, instantaneous fuel viscosity is processed and compared with the value set by the operator.

If the ACS is integrated with an Alfa Laval FCM, the control unit will reduce the heating power in order to control fuel viscosity. The combination of the valve setting and continuous control of heating power ensures a safe and gradual changeover without the risk of a thermal shock.
