However, you may compare a value greater than 255 with an Integer set. Delphi simply uses the lowest byte of the Integer. For example, a test value of 258 would have a lower byte value of 3. Related commands

Delphi Basics : In command
Remember that a Set declaration is a variable.As such, it has all possible values set off at the start. When you initialise the set, you will be setting some or all of these values on. You can then check a variable to see if its value is in the set.

Delphi Basics : Set command
Description: The For keyword starts a control loop, which is executed a finite number of times. The Variable is set to the result of the 1st Expression.If the result is less than or equal to the result of the 2nd Expression (when to is specified), then the Statement is executed.Variable is then incremented by 1 and the process is repeated until the variable value exceeds the 2nd expression value.
