Fencing For Conservation Restriction Of

Fences are usually described as free-standing structures aimed at restricting or preventing movement across boundaries. By these definitions, conservation fences can include standard post and wire fences, but also more surreal barriers such as sisal rope covered in chilli paste, and live fences such as hedges.

Fencing for conservation: Restriction of evolutionary ...

Elsewhere, fencing is not considered important or viable. Where poverty is rife, it won't take much to tip the balance from beneficial conservation areas to troublesome repositories of crop-raiders, diseases and killers. Conversely, in New Zealand fences are used to keep animals out. Introduced species have decimated New Zealand's endemic birds, reptiles and invertebrates, and several sites have been entirely encapsulated

The protection of biodiversity from overuse by fencing it off from the surrounding landscape is one of the conservation tools available to us. Fences have become common features of our environment and firmly entrenched in our lives, as we use them to surround our farms, houses, and anything we want to keep to ourselves or protect.

Fencing for Conservation | SpringerLink

Fencing for conservation is an acknowledgement that we are failing to successfully coexist with and, ultimately, conserve biodiversity. Fences arose during the Neolithic revolution to demarcate resource-rich areas (food sources) and exclude threats (intruders). Fencing for conservation can be viewed as fulfilling a similar function.
