Use a hardening modeling clay to construct a Greek temple to display in your classroom. To create the look of the modeled stone of the temple, combine gray and white clay together and run it through a pasta machine. This will gently mix the colors together without blending them fully. Construct the temple and allow this to harden.

The printed model measures about: 60mm x 40mm x 50mm tall. It used about 2.5 meters of 3mm filament which cost about \$1.50. You could certainly make it cost less by hollowing out the model, but that would have been more complicated (we'll look at doing that with OpenSCAD in a future tutorial.) Here's the resulting glow-in-the-dark Greek temple.
