18 Chapter Reaction Rates Equilibrium Answers

In a chemical reaction, chemical equilibrium is the state in which the forward reaction rate and the reverse reaction rate are equal. The result of this equilibrium is that the concentrations of the reactants and the products do not change. However, just because concentrations aren't changing does not mean that all chemical reaction has ceased.

Chapter 19 Reaction Rates and Equilibrium

In an equilibrium, the forward reaction occurs at the same rate as the reverse reaction. Let's consider a hypothetical chemical reaction in which the reactants are represented by A and B, and the products by C and D. At the beginning of the reaction, only A and B are present, but as the reaction proceeds, C and D are formed.
